SECTION 5. TERMS OF REFERENCE

BACKGROUND

In 2024 – 2027, UNDP and UNICEF jointly implement the “Advancing Quality Education and Lifelong Learning Opportunities for All” programme funded by the European Union. The programme's overarching objective is to contribute to human capital development in the Republic of Moldova, improving the quality and relevance of education and lifelong learning opportunities for all to match the labour market demands better. To achieve this, the Programme will target the following specific objectives:

1. Strengthen institutions and systems for teacher and school leader professional development and support the implementation of education policies to enhance the quality of teaching and learning (Development Strategy “Education 2030”).
2. Improve equitable access for all children to quality education, promoting the development of an inclusive, digital, and resilient education system.
3. Upgrade learning environments by renovating selected school infrastructures and facilitating the development of 21st-century skills, contributing to better education opportunities for pupils and students and improved efficiency of the school network.

Under this joint Project, UNDP will support the Ministry of Education and Research to ensure equitable access for all children to quality education and, therefore, to schools, particularly in rural areas and less accessible communities.

In the Republic of Moldova, managing school transportation involves multiple stakeholders: educational institutions, local public authorities, and the Ministry of Education and Research. The current challenges they face are the lack of a centralized system for real-time tracking of school buses, difficulties obtaining detailed reports on resource usage and compliance with regulations, and insufficient coordination among parents, administrators, and drivers, impacting trust in transportation services.

To address these challenges, the Ministry of Education and Research intends to benefit from fleet monitoring services based on an existing market solution offered via subscription. These services will significantly improve school transportation management's safety, efficiency, and transparency.

The to-be-procured fleet monitoring services must adhere to national regulations and standards governing student transportation, including:

- Government Decision No. 903/2014: approves the regulation on student transportation, establishing rules for organizing and conducting school transportation.
- 2024 Amendments: updates rules for student transportation, ensuring access to quality education and improving school bus transport regulations.
- Order no. 292A of 28 September 2023 establishes measures for transporting children and students for the 2023–2024 academic year.

By implementing these services, the Ministry of Education and Research and local authorities can ensure safer, more efficient, and transparent student transportation, supporting educational objectives and improving public service quality.

SCOPE OF WORK AND OBJECTIVES

This assignment aims to procure ready-to-use information services for 455 school buses to monitor school transportation through modern functionalities over a period of 21 months (September 2025 – May 2027). The services will be procured by UNDP Moldova but subscribed to the school bus owners/administrators and to the Ministry of Education and Research.

The school bus fleet varies in size and ownership from district to district. There are five types of school bus ownership: the Ministry of Education and Research, the District Council (Consiliul Raional), the Department of Education within the District Council (Direcția Învățământ, Tineret și Sport/Direcția Generală Educație), Local Public Authorities (Primaria), and school.

In most cases, the buses belong to the Department of Education within the District Council; however, many schools also own and manage buses directly. The body that owns the buses is responsible for route planning and daily monitoring of the buses, drivers, and transported students and will be the primary user of the fleet monitoring services, with some exceptions, such as the Ministry of Education and Research, which may own buses, but will not be responsible for their daily management.

School buses pick up students from various rural locations and transport them (from home/pick-up/drop-off points) to their respective schools and back, especially those who study outside their village/commune/city, with a radius of up to 35-50 km.

Therefore, the assignment aims to transform school transportation into a safer, more efficient, and more transparent process, supporting public authorities, educational institutions, and parents. The digital services to be purchased through this assignment will achieve the goals described above through the functionalities described below:

I. Real-time bus monitoring

This feature allows users with corresponding rights to monitor the movement of school buses in real time.

Bidders should offer options for bus monitoring via GPS. This will allow real-time vehicle position monitoring, providing accurate and reliable data on their position, speed, stops, and travelled distance.

- **GPS monitoring:** This involves installing a dedicated GPS device in the bus for the duration of the contract, which constantly transmits vehicle coordinates to the central server. The device must be robust and ensure continuous transmissions without interruption, providing accurate vehicle location data at all times.
- **Monitoring on map:** All users of the solution, such as administrative staff, drivers, and representatives of the Ministry of Education and Research, will be able to visualize the bus's location in real time on an interactive map available in the web portal/application. This portal should be easily accessible and provide frequent updates of the bus's location.

II. Driver management

The procured services should allow driver management, including registration, monitoring, and assigning drivers to routes.

- **Driver registration:** Each driver must be registered in the system by the administrator.
- **Driver assignment to buses:** The solution administrators will manually assign drivers to buses and related routes according to availability and operational needs.
- **Driver performance monitoring:** each driver's activity, including route adherence and driving time, speed, shall be monitored to ensure legal compliance and operational efficiency.

III. Route planning and adjustment/optimization

The procured services should allow for the creation and adjustment/optimization of bus routes according to the number of students and pick-up and drop-off points.

- **Route creation and adjustment/optimization:** Administrators will be able to configure bus routes based on the system's data and modify them in real time if necessary.

IV. Fuel consumption monitoring

The procured services should allow for monitoring fuel consumption. Each vehicle will have the necessary GPS equipment installed in the bus to facilitate fuel consumption monitoring. The fuel consumption data will be used for reporting purposes.

Fuel consumption can be monitored using formulas based on the distance and average consumption of the vehicle. The distance of the route will be calculated based on the map monitoring; each vehicle's average consumption will be introduced manually in the system.

- **Implementation details:** each bus will have an updated fuel consumption log.
- Fuel consumption data will be used in vehicle financial and performance reports.

V. Generation and storage of waybills

The procured services shall be able to automatically generate waybills for each bus and store them for one year (12 months).

- **Automatic generation:** The services should automatically generate detailed waybills based on data about planned routes and students transported.
- **Storage and archiving:** The services should archive the waybills for one year, as required by law, allowing easy access for subsequent audits or verifications.

VI. Reporting and analytics

The services will allow for generation of detailed reports including the following fields:

- Owner
- Educational institution
- Locality
- Car ID
- Car Model
- Driver
- Mileage
- Average Fuel Consumption per 100 km
- Consumed Fuel

The services will allow for generation of detailed reports for the following time periods:

- 1 day
- 1 week
- 1 month
- 3 months
- 1 year
- Custom period set by users with corresponding rights.

Additionally, the service will allow for the generation of customized report, such as:

- **Custom reports:** Fuel efficiency, route efficiency, driver behavior reports, attendance records, etc.
- **Data dashboard:** Visual analytics and KPIs for school administrators and the Ministry of Education.

VII. Integration and interoperability

- **API for future enhancements:** Allow future systems to interact with the fleet management solution.

VIII. User access and permissions

- **Role-based access:** Different permissions for Ministry officials, school admins, bus owners, and parents.
- **Data privacy compliance:** Ensure compliance with appropriate data protection regulations in force in the Republic of Moldova.

IX. Connectivity and offline mode

- **Offline data sync:** If internet connectivity is lost, the services should continue collecting data and sync when back online.

X. Maintenance and support

The procured services will ensure continuous and efficient operation of fleet monitoring services, minimizing downtime and disruptions through:

- 24/7 support for troubleshooting and resolving issues;
- Provision of the latest software updates;
- Inspection and repair of hardware components as needed;
- Ongoing training for staff on system usage and best practices.

The services will include hardware maintenance and support, ensuring that tracking devices and/or other digital equipment are properly serviced and functional. This includes regular diagnostics, troubleshooting, and replacement of faulty hardware components.

The bidders must provide free access to a demo application as part of the evaluation process. Failure to do so may result in the disqualification of the bidder. The access link and credentials must be indicated in the Technical Proposal.

Project Stakeholders and Roles

Implementing the services described in the scope of work involves close collaboration among several stakeholders, each playing a specific role in its use, administration, and supervision.

Drivers, representatives of local public authorities and educational institutions (schools) will be the primary users of the services. Their administrators will use the services for route planning, managing buses, and daily monitoring of student transportation. The schools will also provide data about the transported students and their pickup/drop-off points.

- **Bus drivers** will use the services to follow planned routes, log daily activities, and report any incidents or deviations. The services will help simplify their administrative tasks and create a more organized work environment.
- **Local Public Authorities** organize and finance school transportation in their communities. The fleet monitoring solution allows them to monitor resource usage, access detailed reports on distances, speed, stops, and make informed decisions to improve services.
- **Representatives of the Ministry of Education and Research** will have access to all information within the fleet monitoring portal, and particularly to the routes and reports generated by the solution. The Ministry will use the portal to monitor and evaluate the performance of school transportation, ensuring compliance with national regulations.

The following two tables illustrate the roles, permissions, and functionalities any particular system user will have.
